

**Amendments to the Claims:**

The following reflect Claims 1-22 for the corresponding claims in the pending application:

---

- A<sup>1</sup>
1. (Original) A miniature automated teller machine, comprising:  
a housing having a front keypad operably connected to the housing and a rear keypad connected to the housing,  
wherein the front keypad having a front screen attached to the front keypad, and the rear keypad having a rear screen attached to the rear keypad,  
wherein the rear screen allows an operator of the machine to perform management functions without the management functions being viewed on the front screen by a user of the machine; and  
a door hingedly connected to the housing.
  2. (Original) The machine of claim 1 wherein the housing includes at least one mounting angle attached to the housing for securing the housing within an enclosure.
  3. (Original) The machine of claim 2 wherein the housing includes at least one mounting angle attached to each side of the housing for securing the housing within the enclosure.
  4. (Original) The machine of claim 1 wherein the housing comprises a steel reinforcement material.
  5. (Currently amended) The machine of claim 1 wherein the rear keypad is substantially identical to the same as the front keypad in appearance.
  6. (Currently amended) The machine of claim 5 wherein the rear keypad is provided for performing ~~performs substantially~~ the same functions as the front keypad.
  7. (Currently amended) The machine of claim 5 wherein the rear keypad is provided for performing ~~performs a substantially~~ different functions as compared to ~~than~~ the front keypad.
  8. (Currently amended) The machine of claim 1 wherein the rear screen is the same as ~~substantially identical to~~ the front screen in appearance.

9. (Currently amended) The machine of claim 8 wherein the rear screen is provided for performing ~~performs substantially~~ the same functions as the front screen.

10. (Currently amended) The machine of claim 8 wherein the rear screen is provided for performing ~~performs a substantially~~ different functions as compared to ~~than~~ the front screen.

a<sup>1</sup>  
11. (Currently amended) The machine of claim 1 wherein ~~the door includes a handle~~ the management functions available through the rear keypad and rear screen are the same as the management functions available through the front keypad and front screen.

12. (Original) A wall-mounted miniature automated teller machine for mounting the machine to and through a wall, the machine comprising:

a unitary housing having a front portion and a rear portion, the front portion being fixedly attached to the rear portion,

the front portion having a perimeter forming a lip for engaging the wall upon installation of the machine, wherein the front portion further having a front keypad including a front screen,

the rear portion having a rear keypad including a rear screen, wherein the rear screen allows an operator of the machine to perform management functions without the management functions being viewed on the front screen by a user of the machine; and  
a door hingedly connected to the housing.

13. (Original) The machine of claim 12 wherein the housing includes at least one mounting angle attached to the rear portion for securing the housing within the wall upon installation of the machine.

14. (Original) The machine of claim 12 wherein the housing includes at least one mounting angle attached to each side of the rear portion for securing the housing within the wall upon installation of the machine.

15. (Original) The machine of claim 12 wherein the housing comprises a steel reinforcement material.

16. (Currently amended) The machine of claim 12 wherein the rear keypad is ~~substantially identical to~~ the same as the front keypad in appearance.

17. (Currently amended) The machine of claim 16 wherein the rear keypad is provided for performing ~~performs substantially~~ the same functions as the front keypad.

18. (Currently amended) The machine of claim 16 wherein the rear keypad is provided for performing ~~performs a substantially~~ different functions as compared to ~~than~~ the front keypad.

19. (Currently amended) The machine of claim 12 wherein the rear screen is the same as ~~substantially identical to~~ the front screen in appearance.

20. (Currently amended) The machine of claim 19 wherein the rear screen is provided for performing ~~performs substantially~~ the same functions as the front screen.

21. (Currently amended) The machine of claim 19 wherein the rear screen is provided for performing ~~performs a substantially~~ different functions as compared to ~~than~~ the front screen.

22. (Currently amended) The machine of claim 12 wherein ~~the door includes a handle~~ the management functions available through the rear keypad and rear screen are the same as the management functions available through the front keypad and front screen.
